

On-site simulator coaching

Motorsport Consulting offers specialised driver development training for drivers who want to increase their effectiveness in training and increase their on-line and on-track racing skills.

We have invested years of time and education in understanding what it takes for a racing driver to perform. This fundamental part sets us apart from other driver coaches in the field. The scientific background in the mechanisms and those fundamentals of driver performance allows to coach us at a deeper level. Combined with experience in the field and championship success provides a strong support package.

Furthermore, having spent years in a driver development centre and racing teams where simulators have intensively been used, no lack of sim-coaching skill sets.

The employed techniques are applicable for any car or simulation device. Therefore, we are able to offer onsite training, whether it is at a home location, driver development centres, racing team simulator or simulators on track.

Training is tailored to the individual needs, but topics covered can be:

- Enhancing general car-control techniques (Braking, steering, throttle, etc.)
- Data-and racing line analysis
- Enhancing focus and concentration
- Enhancing precision
- Getting that all-important qualifying lap
- Techniques to remain calm and collected
- Full pre-event preparation (plan for each element of the race event)

We are able to cater training at your desired location **across the globe**.

With an MSC degree in Motorsport Engineering & Management, substantial additional years of practical experience in mostly single seaters, but also GT's and sportscars, with driver and team championships to our name, we can show our pedigree in these specific skill sets.

Motorsport Consulting is able to provide a high quality of work at the highest possible level.

Using simulators to the best way possible

A lot of people have access to a race simulator these days. One at their racing team, one at work, one at a friend's house one at home. So, there is easy access to cut some laps. No matter how sophisticated your set-up is, you can get out there and drive.

If you are a serious racing driver who wants to become better on track, 'just doing some laps' and 'just driving some laps for fun' won't cut it anymore. There are many others out there that are doing more and better!

That is why you need to make sure that **every lap counts**, on-track as well as on-line. It is important that you learn and develop **true racing skills** in order to perform. This means that you have to **train specific elements and techniques** in order to excel at your driving and truly be a winner.

This counts for **eSports** athletes and gamers as well. How are you going to defeat your competitors? You got to make sure that you do every lap with a purpose and learn from it.

And let's be honest, every tennis player, football player, boxer, martial arts athlete, swimmer, ice skater etc, no matter where they are in their career, **they all have a trainer or coach!** They want to get better!
